Etipack

In 1978, Etipack was formed in Milan, Italy, specialising in new automated production methods and technologies. Very soon they found their abilities adapted well for the Italian packaging industry.

Now, together with a comprehensive network of distributors and agents, Etipack is a leading supplier of labelling machines, feeders and product handling systems in Europe.

Global experience, local support

In the UK, Advanced Labelling Systems Ltd is the local point contact for machine sales, technical support and supply of parts and consumables. Part of the Possehl Identification Solutions division, yet with a personal approach, ALS is a reliable partner for all your labelling projects.

Possehl Group

Possehl Identification Solutions

In 2019, Etipack was incorporated into the Possehl Identification Solutions division and then in 2023 so was ALS. While still retaining their own identities, the various partners in this group complement each other to optimally serve companies in all industries.

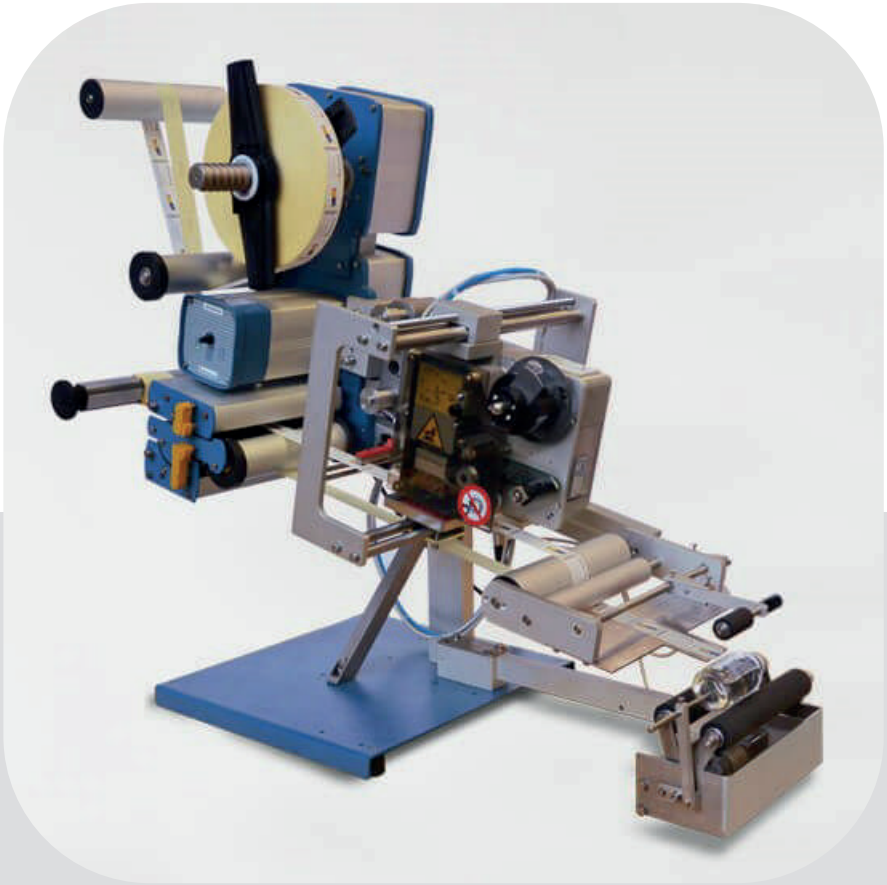
LABELLING

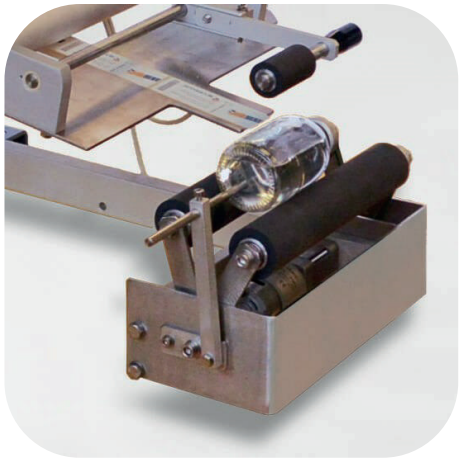
A machine for every application

A wide range of standard product lines allows us to offer the right machine for a wide variety of projects. This broad selection of machines, complemented by the expertise to develop customised systems, enables us to meet the most demanding requirements of all sectors, including:

- Food and Beverages
- Pharmaceuticals & Medical Devices
- Cleaning Products
- Cosmetics and Personal Care
- Contract Packers

SEMI-AUTOMATIC





Scan QR code to access the product page for:
Etipack Starter Semi-Automatic Label Applicator

WHERE TO START? WITH A STARTER!

For smaller volumes, a semi-automatic dispenser is a perfect solution. The STARTER offers the advantage of applying the label accurately in the same position every time. Its simple design makes switching between different product formats and labels a breeze.

The Starter is equipped with a STRONG 200 labelling head and, like all labelling machines, can be equipped with print modules, a label sensor suitable for transparent labels, and more.

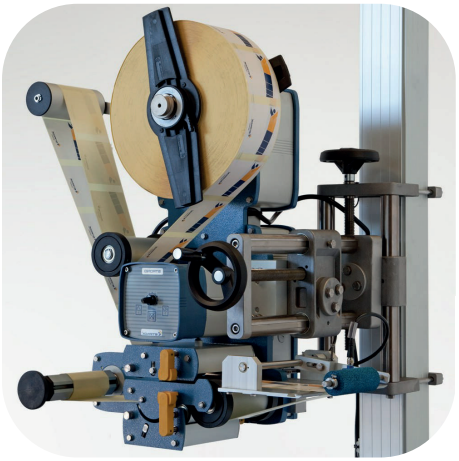
APPLICATORS

Labelling Machines

Our extensive range of labelling machines forms the foundation for all our labelling solutions. They are all designed with the same core features: reliability, durability and modularity.

Three series: STRONG, ENERGY and EXTREME, are divided into different line speeds and widths to meet both simple applications and challenging projects.

A wide range of available options allows the machines to be configured to meet the most complex requirements.



STRONG

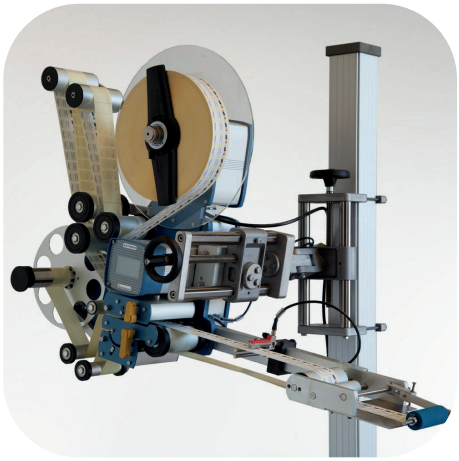
A compact automatic labelling machine yet surprisingly versatile. This machine combines reliability and simplicity at an attractive price.

- Speed up to 30 meters per minute
- 2 widths: 100 and 200 mm
- Stepper motor
- Accuracy of +/- 0.5 mm

ENERGY

Advanced labeller with innovative multitasking electronics. Equipped with a hybrid motor that guarantees optimal control over label dispensing.

- Speed up to 60 meters per minute
- 3 widths: 100, 200 and 300 mm
- Hybrid motor with encoder
- Accuracy of +/- 0.2 mm

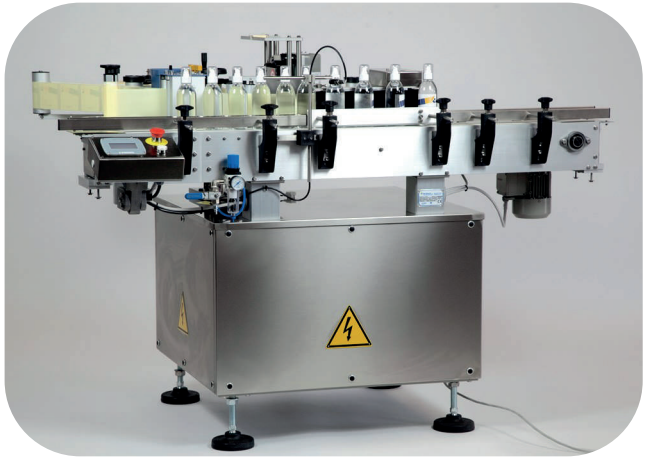


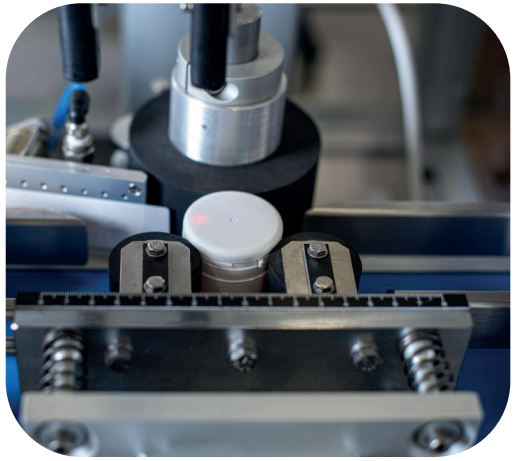
EXTREME

High-speed labelling machine with a speed of up to 80m/min. Combines high capacity with exceptional accuracy.

- Speed up to 80 meters per minute
- 3 widths: 100, 200 and 300 mm
- Hybrid motor with encoder
- Accuracy of +/- 0.2 mm

WRAP-AROUND





Wrap-around labelling systems

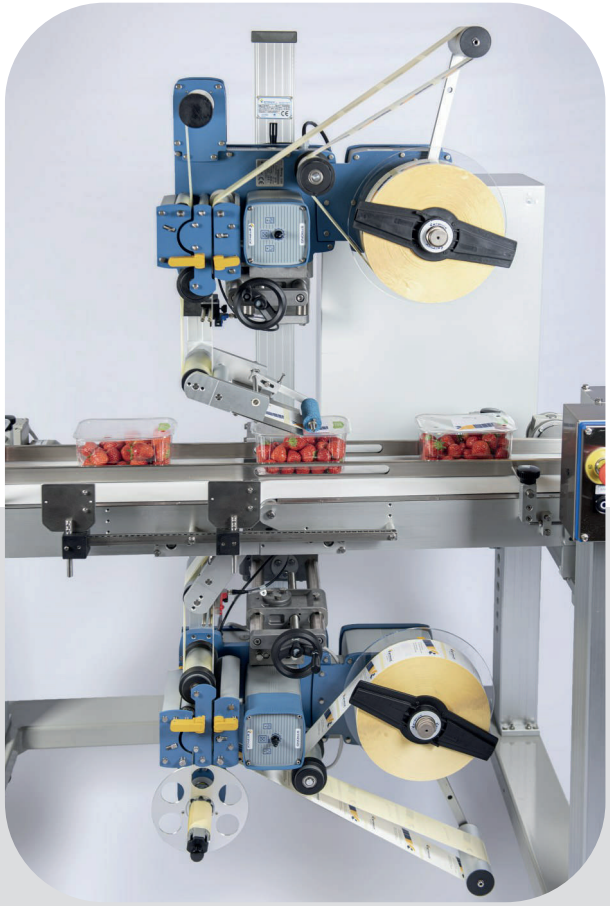
Wrap-around labelling of glass bottles, plastic jars, metal cans, cardboard tubes, etc.

For applying labels to cylindrical products, we offer the SYSTEM 1. This system is equipped as standard with a wrap-around belt that rotates the bottles during labelling.

For conical products or applications requiring oriented label application, we use a 3-roller module or a 2-roller wrap-around belt, which holds the products in a controlled position during labelling.

As with all our labelling systems, the System 1 also offers the option of adding printer modules to the label.

TOP / BOTTOM



Top and/or Bottom Labelling

Labelling on the bottom of trays, foil packaging, boxes, containers, round pots, etc.

The SYSTEM 4 can apply labels to the top and/or bottom of all kinds of products. The transport system is equipped with two side conveyors or a double bottom conveyor with space in between, depending on the product type.

A printing module mounted on the label dispenser at the bottom is a common option.

FRONT / BACK

Labelling systems for front and/or back labelling

Side labelling of plastic bottles, metal cans, cardboard boxes, etc. We developed the SYSTEM 5 for applying labels to the front and/or back of rectangular and oval products.

This system is equipped with a conveyor belt and an overhead belt that transport the products at a synchronised speed during the labelling process. The System 5 is modular and can be equipped with various modules to, for example, also enable all-round labelling.

OEM

Specific configurations and a customised approach for OEM (Original Equipment Manufacturer) companies support the integration of our labelling machines and feeders into packaging machines such as flow-wrap systems, cartoning machines and more.

UNI EN ISO 9001:2008 Certification

Since 1995, UNI EN ISO 9001:2008 has certified the quality of the processes applied to all production phases, including design, production, installation and support.

ABOUT ALS

Advanced Labelling Systems Ltd have been building industrial labelling & product handling machines and manufacturing printed self-adhesive labels at our Oxfordshire base, since 1997.

We have our own machine assembly workshop and label printing & converting facilities.

ALS Advanced Labelling Systems Limited

Our history

ALS is recognised as a specialist in delivering both standard machines and customised solutions. We have a large modern manufacturing facility offering a full range of services provided by our experienced technicians and production operators.

Our history

ALS was set up back in 1997 from the UK operation of Avery Dennison. It ran as a family business for 25 years when, in 2023, we sold a majority stake to Possehl Group to help us grow, where we continue to operate under the same principles of employing good people, nurturing young talent and providing our customers with a quality product backed up by excellent service.

Labelling, feeding, printing, coding, scanning... identifying

Etipack & ALS

Etipack designs, manufactures and sells labelling and coding systems with pressure sensitive labels and friction feeders for product handling and distribution. Since 1978 Etipack has been a leading company in Italy within the packaging machines industry.

Etipack's UK distributor, Advanced Labelling Systems Ltd (ALS) is a British company that has been making automatic labelling machines since 1997, at their own assembly workshops. They provide full UK sales and service support for Etipack equipment.

Etipack & ALS are part of PID - Possehl Identification Solutions division, by Possehl Group.
