

YOUR PRODUCT IDENTIFICATION EXPERTS

Labels

We know labels!

We have been applying labels and printing barcodes for decades, so we know a thing or two about what makes a good quality label. Therefore you can be assured that ours are of the highest quality.

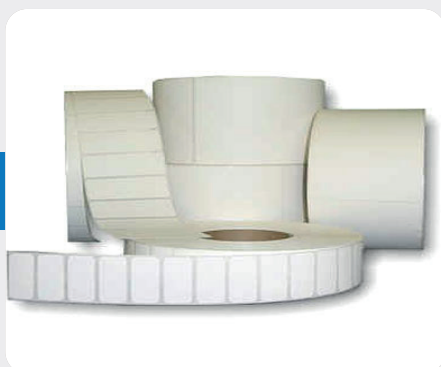

(And made in the UK)

ALS and **Novexx Solutions** are part of the same Possehl Identification Solutions Group, so we are licensed to manufacture Novexx labels in the UK and sell them direct to you.

High-quality printing & converting at very competitive prices, with peace of mind to work reliably in your printer, applicator or print & apply labeller.

Plain / Blank

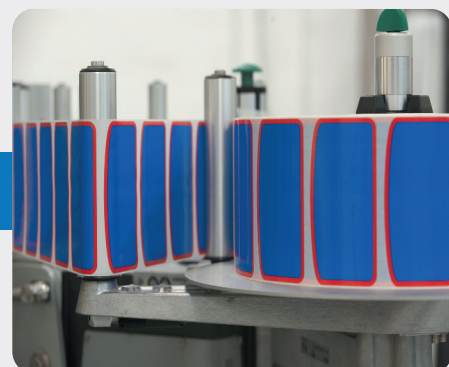

For shipping, outer case barcodes, pallet labels or identification purposes, our plain white paper thermal transfer & direct thermal labels are ideal. Bright white, die-cut & supplied on rolls. Perfect for barcode printing.

Inkjet

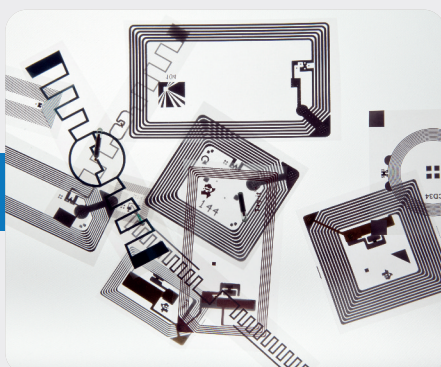

High quality, quick-drying labels for inkjet label printers. Brilliant white & available in a range of standard or custom shapes and sizes. No smudges & excellent brightness of printed colours make for superb results.

Coloured

Simple, plain, coloured labels suitable for all thermal transfer printers. Standard basic colours or select a specific pantone. Great for easy product identification, visual warnings, give impact or highlight priority shipping.

RFID

RFID-embedded labels ("smart labels") are labels that contain a tiny Radio Frequency Identification chip & antenna, allowing them to store & transmit data wirelessly using radio waves. Embed with any label design.

Security

Embedded, anti-theft, security tags incorporating RF & AM/"Sensormatic" elements, plus tamper-evident security materials are available. Special perforations & other tamper-evident options available.

Flexo & Digital

UV Flexo, for mid-to-high volume quantities, suitable for a huge range of materials, and Digital Print for photo quality using both digital toner & inkjet processes. Digital printing is ideal for shorter runs, with no plate costs.

Why choose ALS for your labels....

- Wide range of standard plain sizes
- Full colour printing & converting on-site at Thame
- Suitable for automatic application
- Reduced dust, prolongs print head life
- No die-strike, so labels won't snap in your labeller
- Specialist multi-layered & embedded constructions
- Fast turn-around & exceptional quality
- Novexx branded, for your assurance of quality
- Prices hard to beat!

Tactile

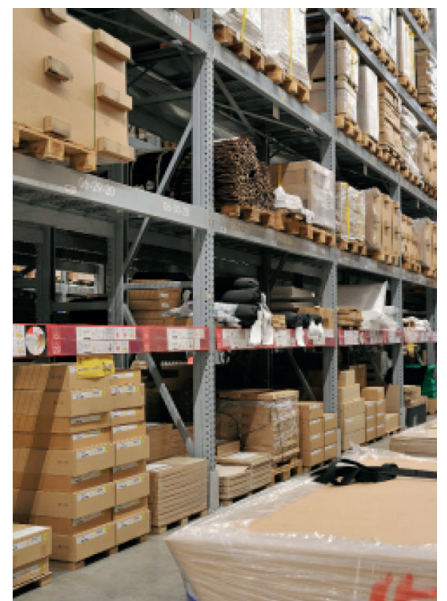

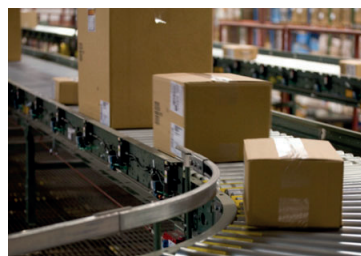

Clear, raised, warning triangles for the blind or partially-sighted, to warn of harmful substances by touch. Supplied in various sizes or can be applied to your existing labels to make them compliant.

Cover-up

Labels with a nice bright white face top but with a dark, permanent, "block-out" adhesive which covers up anything it is applied to. Great for correctional overlabelling, suitable for thermal transfer printing or pre-printed with your artwork.

Enabling labelling

About *ALS*

Advanced Labelling Systems have been building industrial labelling machines & manufacturing printed self-adhesive labels at our Oxfordshire base, since 1997

Our history

ALS was set up back in 1997 from the UK operation of Avery Dennison. It ran as a family business for 25 years when, in 2023, we sold a majority stake to Possehl Group to help us grow, where we continue to operate under the same principles of employing good people, nurturing young talent and providing our customers with a quality product backed up by excellent service.
