

YOUR PRODUCT IDENTIFICATION EXPERTS

Ribbons

We know thermal transfer ribbons!

We have been supplying thermal transfer printers, coders and print & apply labellers for decades, so we know a thing or two about how to print a good quality barcode label on different types of materials. Therefore you can be assured that our ribbons are of the highest quality.

(And stocked in the UK)

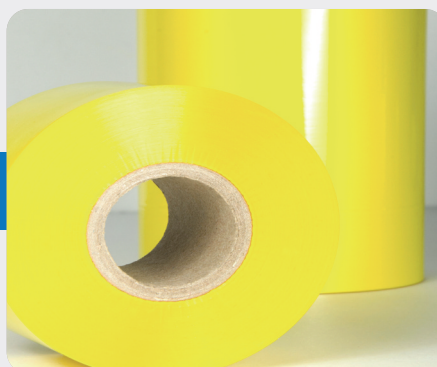

ALS and **Novexx Solutions** are part of the same Possehl Identification Solutions Group, so we sell genuine Novexx thermal transfer ribbons, stocked in the UK, ready to ship direct to you.

UK Stock

Black ribbons in wax & wax-resin grades, for flat head & near-edge printers, are available for next-day delivery. It doesn't matter if you don't know what type of print head your printer uses – we will!

Coloured

A whole rainbow of coloured thermal transfer ribbons are available. Standard wax/resin colours are: Yellow, Magenta, Cyan, Light Red, Orange, Brown, Light Green, Light Blue & White. Custom colours can be made too!

Specialist

Super premium performance ribbons based on a pure resin content. Extremely resistant to scratching & abrasion. High resistance to solvents and other chemicals. Suitable for exposure to very high-temperatures.

Wax

Wax ribbons provide a very dense black print which gives great contrast for barcodes and text on standard plain labels. Best for outer-cases, pallets & shipping labels, totes & crates, clothing tags and food packaging.

Wax-Resin

Wax-Resin ribbons are extremely versatile. Designed to print on all kinds of self-adhesive labels with high smudge & scratch resistance. Suitable for medical & food packaging, outdoor products & retail labels, tickets & tags.

Pure Resin

A general-purpose, but hard-working, resin ribbon, suited for the most demanding applications in terms of durability, such as; tyre labels, patient wristbands, laboratory labels, rating plates & chemical labels.

Why choose ALS for your ribbons....

- Novexx branded - for your assurance of quality
- Available for other makes too, such as; ICE/Clearmark, Videojet, Markem, Sato & Zebra
- Suitable for Near-edge & Flat-head printers
- We match ribbons to your specific printer & labels
- Standard range of widths & lengths
- UK stock - available next working day (UK mainland)
- Prices hard to beat!

Choose your
ribbon wisely &
you will be
rewarded!

The simple-looking consumable used in thermal transfer label printers plays a crucial part in ensuring that your printed text looks sharp and readable and your barcodes are within specification and scan first-time. ALS is part of the Novexx Solutions and EIDOS family (Possehl PID) and supplies genuine thermal transfer ribbons from UK stock.

Enabling labelling

About *ALS*

Advanced Labelling Systems have been building industrial labelling machines & manufacturing printed self-adhesive labels at our Oxfordshire base, since 1997

Our history

ALS was set up back in 1997 from the UK operation of Avery Dennison. It ran as a family business for 25 years when, in 2023, we sold a majority stake to Possehl Group to help us grow, where we continue to operate under the same principles of employing good people, nurturing young talent and providing our customers with a quality product backed up by excellent service.
