

manage.ID

Print Management Software Solution

Lean back and relax, while we take care of your identification process.

- Manage your print data & processes
- Connect all of your product identification devices
- For all your printer brands & technologies
- Configurable to your individual needs

Our team of experts has identified packages which cover most common product identification processes:

manage.ID Connect

Print process initiated by:
Corporate system (automatically)

manage.ID Connect transfers data from corporate systems (ERP/MES/...) into print jobs to control the identification processes automatically.

manage.ID Select

Print process initiated by:
User via browser-supported device

manage.ID Select enables operators to control the identification process with a modern and browser-based user interface from any device (e.g. PC or tablet) within the network.

manage.ID Sync

Print process initiated by:
Supported print hardware of PID members

manage.ID Sync synchronizes data, layouts and/or print jobs with compatible print hardware on which machine operators can initiate the identification process as they are used to.

manage.ID Control

Print process initiated by:
Scanners, I/O devices, PLC etc.

manage.ID Control identifies and tracks the logistics units during the production process and ensures that the identification process is executed with the right data at the right time.

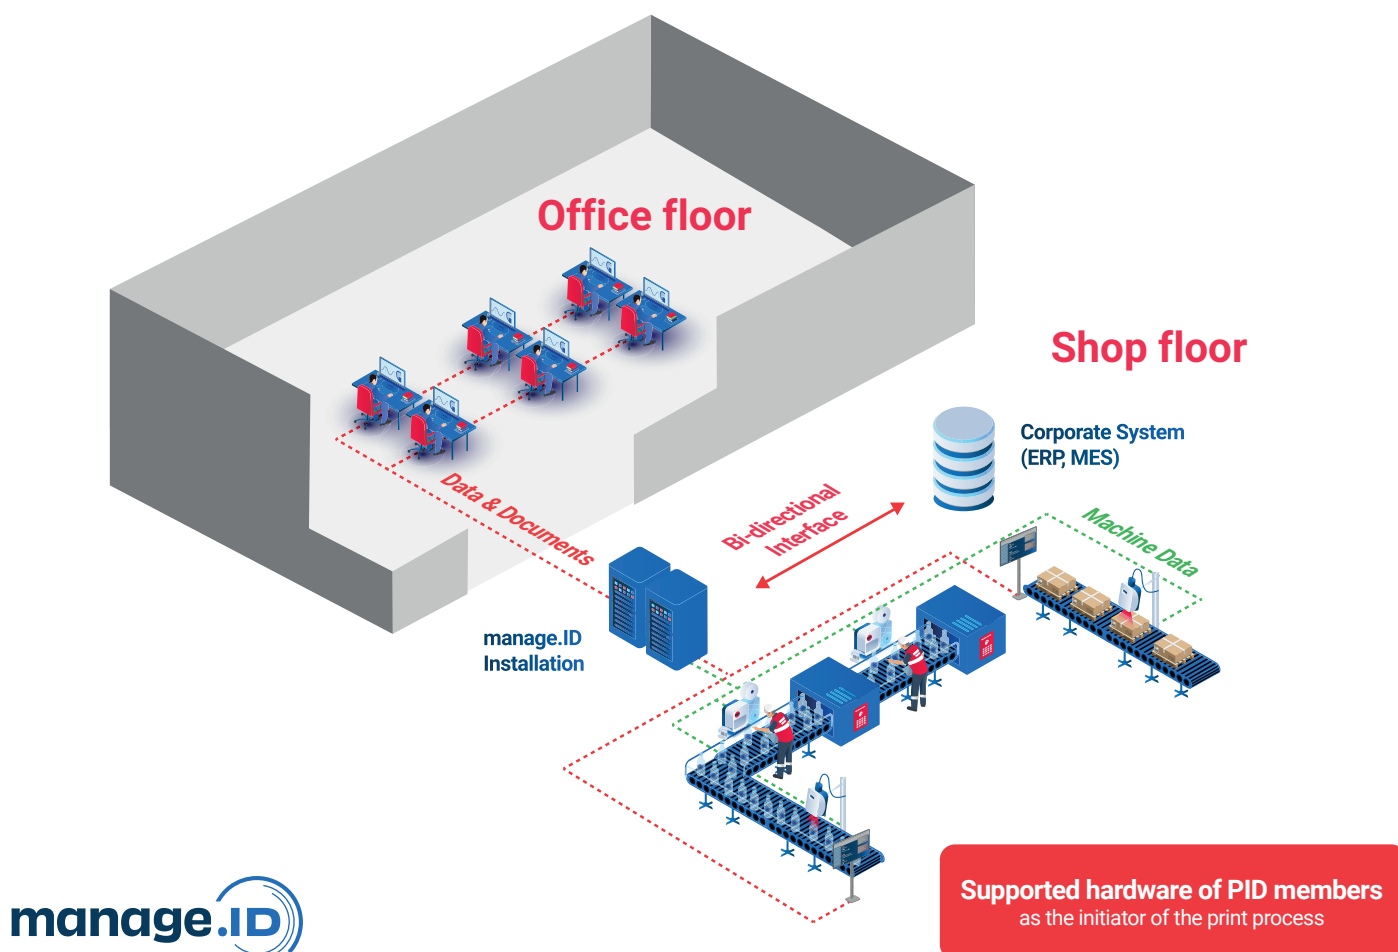

manage.ID Sync

Guaranteed up-to-date print data even without a continuous network connection

Introducing manage.ID Sync: Seamlessly synchronize data, layouts and/or print jobs with supported print hardware. Print directly from printer interfaces without extra steps in manage.ID. Continuous background synchronization ensures up-to-date print information at all time.

- Up-to-date business data combined with stand-alone printing
- Store traceability logs in the manage.ID database for comprehensive print history and data exchange with other systems
- Guaranteed uptime, even without a network connection
- Seamless integration with minimal impact on the business processes
- PID hardware & software combined solution for a maximum of synergy
